

41	COORDINATED COASTAL MAPPING	Amalie Couvillion	acouvillion@tnc.org
	GEM Study Area		
	<p>This proposal solicits support for coordinating shoreline mapping efforts throughout the oil spill area. This proposal addresses the need for coordination in coastal mapping, rather than for collecting and ground-truthing new information. The key expected result from a well-coordinated coastal mapping effort is a unified, seamless, ShoreZone map covering the entire GEM study area that will be electronically available to researchers, local governments, industry, and the general public.</p>
